Color Business Report

Index to Volume 8 (January 1998 - December 1998)

Index for current year can be accessed on our website: http://www.blackstoneresearch.com

Editor and Publisher: Michael Zeis

Color in everyday business
The *Color Business Report* covers color computer products, color reprographics , and related issues. An editorial premise is that, in time, computer-based color will be incorporated into everyday business applications, and will begin to be used in the home, as well. In writing the *Color Business Report*, the editors hope to help product managers and strategic planners understand the links between products and applications by mixing product news, feature articles on technologies and applications, and user profiles.

Broad product coverage
With some exceptions, color applications rely on a set of components that have to work together (scanners, monitors, and printers, for example). For this reason, the charter for product coverage in the *Color Business Report* is quite broad. In an environment that is headed toward universal or common platforms and away from proprietary solutions, the success of a particular color product depends greatly on the performance of other products in the system. Thus, we feel, product managers and students of color markets are challenged to keep current on product categories that may be new to them, and out of their usual domain.

Reporting on end users
The *Color Business Report* has a special interest in reporting on users of new products, from leading edge users who exerciseproducts to their fullest, and from users who might be called "the target market." Our coverage of user applications is based on personal or telephone interviews, usually with the intention of describing the environment of use and the sales environment.

Custom research available
The *Color Business Report* is published by Blackstone Research Associates, a market research and publishing firm. Blackstone Research Associates specializes in using end-user field research to support clients' proprietary information requirements. In addition, Blackstone Research publishes market reports such as *Barriers to Color Adoption* and *Color in the Office: The Dynamics of Adoption*.

How to Use This Index
Because the *Color Business Report* covers color products, the word "color" is usually not included in index categories or citations. Citations include issue (month) and starting page number. If an item includes a photograph or print sample, a notation is made. Free-standing inserts are identified as such in italics after the citation. Titles of charts and tables are printed in italics. Citations with the word "chart" following them refer to a listing on a product chart. Back issues are available from Blackstone Research Associates for $30 each ($60 each for non-subscribers). Call or use the order form at the back of the Index.
