

# Color Business Report

## Index to Volume 10 (January 2000 - December 2000)

Index for current year can be accessed on our website: <http://www.blackstoneresearch.com>

Editor and Publisher: Michael Zeis

### Color in everyday business

The *Color Business Report* covers color computer products, color reprographics, and related issues. An editorial premise is that, although computer-based color has become more common, purchase cost, operation costs, and complexity still hinder adoption. In writing the *Color Business Report*, the editors hope to help product managers and strategic planners understand the links between products and applications by mixing product news, feature articles on technologies and applications, and user profiles.

### Broad product coverage

With some exceptions, color applications rely on a set of components that have to work together (scanners, monitors, and printers, for example). For this reason, the charter for product coverage in the *Color Business Report* is quite broad. In an environment that is headed toward universal or common platforms and away from proprietary solutions, the success of a particular color product depends greatly on the performance of other products in the system. Thus, we feel, product managers and students of color markets are challenged to keep current on product categories that may be new to them, and out of their usual domain.

### Reporting on end users

The *Color Business Report* has a special interest in reporting on users of new products, from leading edge users who exercise products to their fullest, and from users who might be called "the target market." Our coverage of user applications is based on personal or telephone interviews, usually with the intention of describing the environment of use and the sales environment.

### Custom research available

The *Color Business Report* is published by Blackstone Research Associates, a market research and publishing firm. Blackstone Research Associates specializes in using end-user field research to support clients' proprietary information requirements. In addition,

Blackstone Research publishes market reports such as *Barriers to Color Adoption* and *Color in the Office: The Dynamics of Adoption*.

### How to Use This Index

Because the *Color Business Report* covers color products, the word "color" is usually not included in index categories or citations. Within selected vendors, citations are sorted by technology, model number, and date. Within other vendors with shorter listings, citations are sorted by date. Citations include issue (month) and starting page number. If an item includes a photograph or print sample, a notation is made. Titles of charts and tables are printed in italics. Citations with the word "chart" following them refer to a listing on a product chart. Back issues are available from Blackstone Research Associates for \$35 each (\$65 each for non-subscribers). Call or use the order form at the back of the Index.

### May 2000 DRUPA Supplement

In May 2000, soon after the DRUPA trade show in Germany, the *Color Business Report* published a six-page *DRUPA Supplement*. The material covered in the *DRUPA Supplement* has not been indexed in this document, since all of the items covered in the supplement appeared several weeks later in the June 2000 *Color Business Report*.

### Which November 2000 Issue?

We did not "bump" the month and issue number up on the cover of the November 2000 *Color Business Report*. Just like the October issue, the first page of the November issue says "October 2000, Volume 10 Number 10." There are two ways to tell which is the real November issue. First, we *did* change the footer, so every page on the inside of the newsletter says "November 2000." Second, the cover story for November was the Oki Data C7000 printer. On our copy, we covered the incorrect information with small labels that have the right month and issue number.
